

# FTR Touch

**FTR Touch™** is a stand-alone digital audio recording device for courtrooms and hearing rooms. Based on a combination of touch-screen hardware and adapted FTR Gold® software, FTR Touch leverages the stability and robustness of the FTR Gold platform, while delivering an elegant and intuitive solution to accommodate the needs of a variety of venues. It can also be deployed in a mixed FTR environment alongside other systems running FTR recording and review applications.

FTR Touch is available in two forms - one that can record up to eight (8) channels, and a separate 2-channel-only recording version for smaller venues.

Current FTR users can therefore leverage their existing FTR solution investments and benefit from the sleek and refined user-experience offered by FTR Touch, without the training requirements typically associated with new products. New users, on the other hand, can start to take advantage of the many features & benefits of FTR Gold, offered now in a unique and elegant form factor.

FTR Touch enables users to optionally enter QuickNotes via one-touch, user-definable soft keys displayed on the unit. It is also bundled with a copy of FTR Log Notes, a software annotation tool that enables users to take more comprehensive, automatically time-stamped notes on a separate PC, completely independent of the FTR Touch recording unit. In addition to storing recordings on its own internal hard drive, FTR Touch enables recordings to be archived to a removable external USB drive or CD/DVD<sup>1</sup>, or network location. When archiving to the network, FTR's patented ThinkLink™ technology within FTR Log Notes enables users to easily retrieve recordings and perform playbacks directly from their own PC at any time, instead of having to interact with the FTR Touch unit.

## Benefits of FTR Touch

**FTR Touch** offers several advantages to both new and existing FTR users.

### Increased reliability

- Dedicated recording device - the critical recording function is handled separately and not shared with other services running on a standard PC
- Built on the FTR Gold platform - proven stability and robustness

### Greater versatility

- Up to 8-channel recording - suits individual deployment needs
- Archive recordings to a removable external USB or CD/DVD drive, or network location

### Security & simplicity

- Optional unlock-password for normal operational access - prevents unauthorized use
- Separate optional administrative-password for settings access – prevents operator misuse
- Touch-screen interface with built-in optional QuickNotes – streamlined, intuitive operation
- No keyboard or mouse – one-touch operation

### Reduced risk

- Intuitive interface - minimal operator training
- Integrates seamlessly - virtually no impact on existing operational procedures
- Implemented on standardized hardware – eliminates potential hardware incompatibilities
- Upgrades can be downloaded and easily applied by the user
